SmokeSight

Smoke Alarms

SmokeSight are the only interconnected smoke alarms that are designed and made in Australia. They:

- sound only when necessary ie false alarms are minimised
- are simple to install and setup
- require minimal servicing

These simple qualities define our purpose.

SmokeSight smoke alarms are designed by Australian engineers so you can be sure that they are designed for Australian conditions such as humidity, temperature and insects. Building materials and methods also affects wired and wireless interconnection performance. This local knowledge enhances smoke alarm quality. Another reason to buy Australian made.

AUSTRALIAN MADE

Gadgets and gimmicks do not feature in SmokeSight interconnected smoke alarms. For example WiFi enabled remote access and wall mounted, smoke alarm controllers provide questionable benefits, increase complexity and add points of failure.

Only features that improve safety, simplicity and reduce nuisance or false alarms make it into SmokeSight.

SmokeSight (Models SS10MAMA, SS10MANN, and SS10LNAN) were tested by CSIRO in 2020 as conforming to AS 3786:2014 and certified under ActivFire®. ActivFire® certification lapsed 30 April 2022.

Features

CalmAlarm – Real time compensation for temperature and humidity variation as well as gradual dust build-up.

Nuisance alarm events are less likely with CalmAlarm. Environmental changes are accommodated so you can relax.

AutoTest – An automatic, 5 second sound test. At a time convenient to you every week, fortnight or four weeks. Or, simply disable it.

Smoke alarm damage is less likely with AutoTest as there is no need to touch the smoke alarm in order to perform a test.

BatteryBliss – Backup battery life of up to 5 years on mains powered alarms and 10 years on Li battery powered alarms.

Smoke alarm damage is less likely with BatteryBliss as the need to fiddle with the smoke alarm is substantially reduced or eliminated.

ClapSilence – A false alarm can be silenced with a simple, double hand clap.

Smoke alarm damage is less likely with ClapSilence as there is no need to touch the smoke alarm in order to silence a nuisance alarm.

EscapeLighting – Flashing white LED, alerts you and illuminates your escape path.

Additional help if your vision or hearing is just not 100%, or its the middle of the night!
